**YAMAHA FX 2017+**

**Overview**
To install Ototrack module you will need drill with a drill bit 3.2mm, phillips screwdriver, 10mm wrench and some silicone grease (not silicone spray) for water tight seal on connectors. Package contains Ototrack module, mounting bracket, screws and Yamaha EX cables.

**Connecting Ototrack**
Once you have removed compartment’s side cover (2) and installed Ototrack, disconnect Yamaha’s power (3), throttle (4) and buzzer (5) cable connections and then connect Ototrack cables as shown below.

**Ototrack Installment position**
Lift up the hood (1) by releasing hood latch. Underneath is a bow storage compartment. Remove storage compartment’s side plastic cover (2) and under the steering (handlebar) you will find all the necessary connectors for power (3), throttle (4) and buzzer (5). Ototrack module (6) is installed inside, just under the steering, same as the connectors.

**NOTE:**
For GPS to work correctly, module must be installed with antenna side (indicated by the IMEI sticker) facing upwards (towards the sky).
